Crux

Lecture -15

Data Structures -3

Trees -1

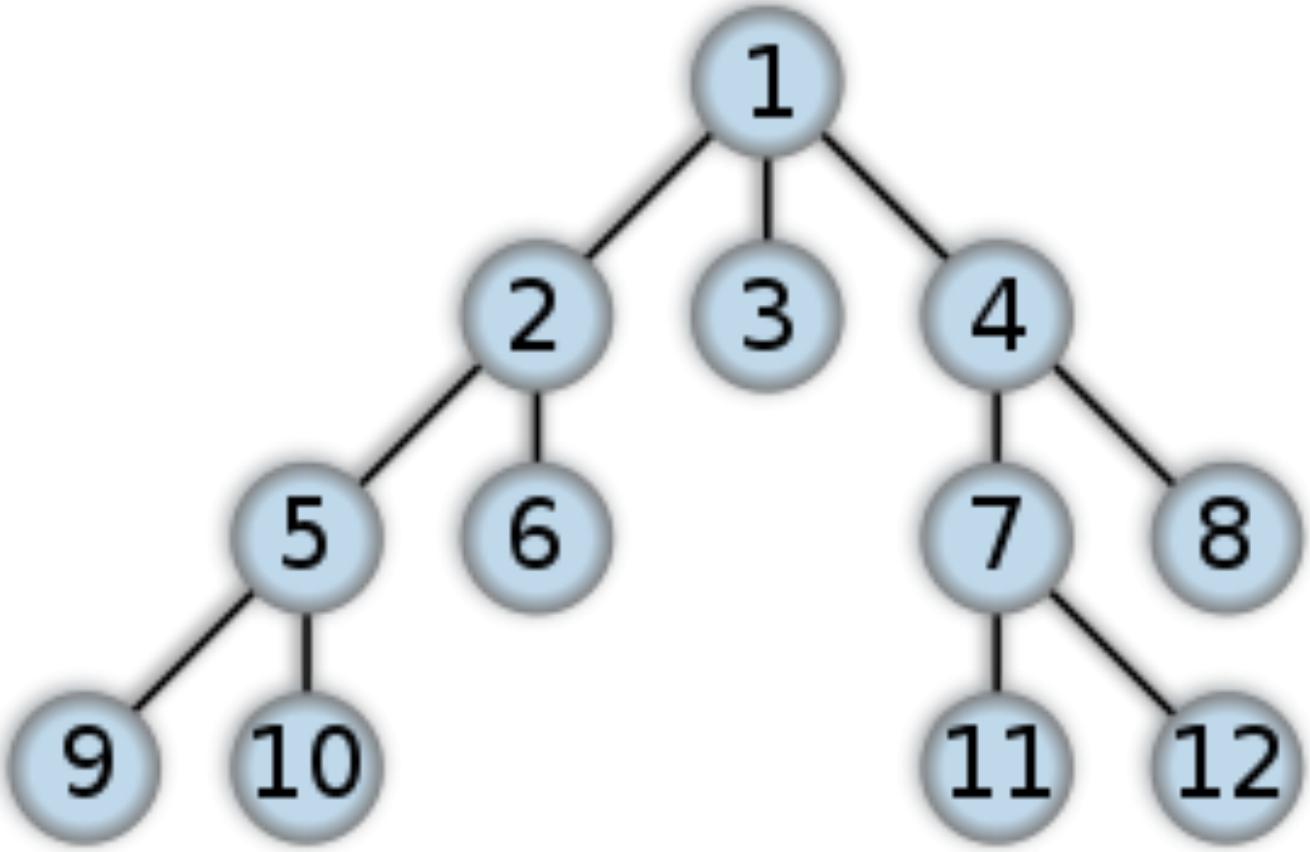
Manisha Khattar

CODING BLOCKS

Assignment doubts?

What's common between a file system and a company's organizational structure?

Trees



CODING BLOCKS

Tree Terminologies

1. Node
2. Root
3. Children
4. Parent
5. Ancestor
6. Descendants
7. Sibling
8. Leaves

How to Implement a Node of a Tree

Node of a Tree

```
Public class TreeNode{
    int data;
    TreeNode[] children;
    TreeNode parent; //Optional
}
```

How to Implement a Tree

1. Use Nodes to create tree in every program
2. Define a Tree class

Tree class

```
Class Tree {
  private node root;
  public int size();
  public boolean isEmpty();
  public int  root();
  public int  parent(node);
  public int[] children(node);
  // etc etc
}
```

Lets see how to input and output Tree

1. Write a function to take tree as input from user
2. Print out a tree

Lets discuss few problems

1. Count number of nodes in a tree

Your Turn

1. Sum of all node in the tree
2. Find the node with largest data in a tree

Tree Important Properties

1. Degree of a Node
2. Depth of a Node
3. Height of Tree

Lets discuss few problems

1. Find Height of a Tree
2. Print all the elements at depth K.

Your Turn

1. Find number of Nodes greater than an integer x
2. Find the node for which sum of the data of all children and the node itself is maximum

A tree walk or traversal is a way of visiting all the nodes in a tree in a specified order.

Lets code these tree traversals

1. Preorder Traversal(Recursive)
2. Preorder Traversal(Iterative)
3. Postorder Traversal
4. Levelorder Traversal

Thank You !! ☺
